

STM8S MCU family 8-bit microcontroller

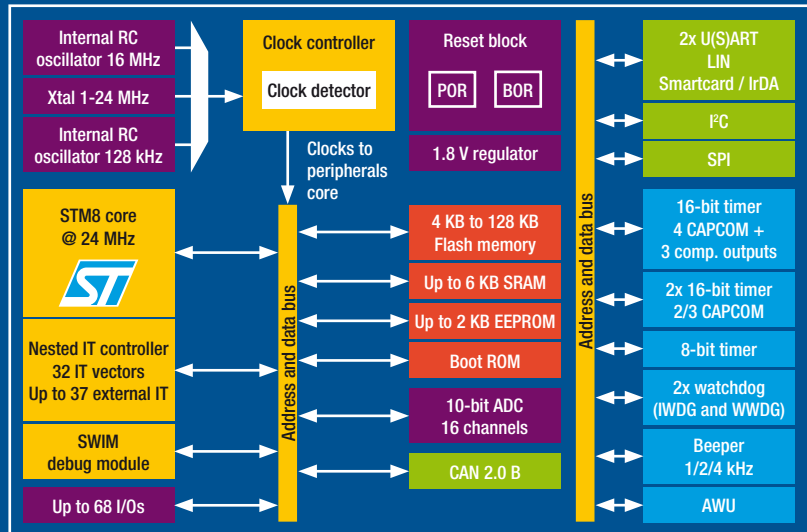

September 2008

STMicroelectronics' STM8S family of general-purpose 8-bit Flash microcontrollers offers ideal solutions for industrial and appliance market requirements. An advanced core version combined with a 3-stage pipeline ranks the STM8S microcontroller in the top position for performance. The true embedded EEPROM and the calibrated RC oscillator bring a significant cost effectiveness to the majority of applications. An easy-to-use and intuitive development environment contributes to improving time to market.

Applications

- Home appliances
- HVAC
- User interfaces
- Factory automation
- Motor control
- Sensors
- Lighting
- Personal care
- Power tools
- E-bikes
- Circuit breakers
- Rechargeable battery operated devices
- Toys and game accessories
- Power supplies and power management

STM8S block diagram

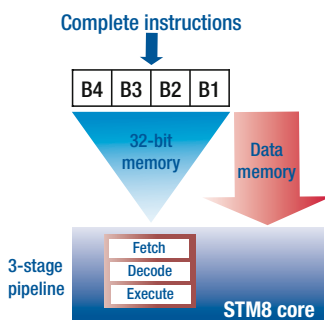

STM8S: robust and reliable

In addition to performance, comprehensive design specifications and specific peripheral features make the STM8S robust and reliable:

- 2 internal RC oscillators with dual independent watchdogs
- Clock security system (CSS) to monitor the failure of external clock source
- Complementary copy of configuration option bytes and EMS reset
- Low emission in accordance with the IEC 61967 standards
- Outstanding robustness performance according to IEC 1000-4-2 and IEC 1000-4-4 standards
- High current injection immunity (1 μ A leakage current when 4 mA current is injected in adjacent pin)
- Dedicated firmware library compliant to Class B of IEC 60335

STM8 core

- 1.6 CPI average
- 20 MIPs peak @ 24 MHz
- 32-bit memory interface
- 3-stage pipeline
- 16-bit index registers
- 20 addressing modes

STM8S MCU family

Features and benefits

Features	Benefits
3.0 to 5.5 V, -40 to +125° C range	Ideal for industrial and appliance requirements
Up to 20 MIPS @ 24 MHz, Harvard architecture	Optimized core performance and code-size efficiency
16-bit advanced control timer	Satisfies all needs with configurable modes, motor control, capture, compare, PWM, and others
Embedded true EEPROM, 300 Kcycles	Lower system cost
CAN, 2xU(S)ART, SPI, I2C	All essential communication peripherals supporting various protocols
Single-voltage Flash memory with single-byte programming granularity	In-application programming (IAP), in-circuit programming (ICP)
4 low-power modes	Efficient power management
Trimable 16 MHz and 128 kHz internal RC oscillators with dual independent watchdogs and 2 µs fast switching between clock sources	Reduced cost, robust clock architecture, optimized power consumption
Integrated POR and BOR	Reliable reset mechanism during power up and down
Low emission and high current injection immunity	Outstanding EMC, no need for extra protection
4 to 128 Kbyte Flash in 20 to 80 pin packages	Package-in-package compatible across family, ideal choice of platform
On-chip debugging and programming through single-wire interface, SWIM	Easy to use, non-intrusive and low-cost development environment
Up to 16-channel 10-bit ADC ± 1 LSB with scan mode, conversion time < 3 µs	Fast and accurate A/D converter

STM8S portfolio

Device summary

Part number	Flash memory (Bytes)	RAM (Bytes)	Data EEPROM (Bytes)	A/D converter	Timer functions (IC/OC/ PWM)	Serial interfaces	Packages	I/Os (high sink)	Others	V _{DD}
STM8S208MB	128 K	6 K	2 K	16x10-bit	1x8-bit, 3x16-bit (9/9/12)	CAN, SPI, 2xUART, I ² C	LQFP80	68(11)	16 MHz RC ¹ 128 kHz RC WWDG IWDG CSS	3.0 to 5.5 V
